Many signals. One reasoning system.

Specialist detection below. Evidence-grounded decisions above.

04 / REASON

LLM MODEL

Reason across signals

Diagnose · explain · prioritize

03 / CORRELATE

EVIDENCE & ALARMS

Shared facts. Linked measurements. Cross-signal context.

Component · timing · observed change · alternatives

Time series
PENDING

Peers / multivariate
PENDING

Events / topology
PENDING

01 / MEASURE

TELEMETRY & DATA

GPU + host · interconnects · training + I/O · logs + topology

Histories · windows · counters · distributions · traces · graphs

HISTORICAL DATA

What happened before.

Normal baselines

Confirmed incidents + causes

Verified fixes + outcomes

Retrieved for the current incident.

CLOSE THE LOOP

- Apply a supported fix
- Re-measure recovery
- Retain verified outcomes

Code enforces action policy + verification.

Specialists detect the signals. The LLM reasons across the system.

Design intent · Detector choices pending empirical validation · Raw source evidence retained throughout
